Psychogenic causes of chronic pelvic pain, and its impact on psychological status

Graziottin A.
Psychogenic causes of chronic pelvic pain, and its impact on psychological status

Psychogenic factors can be powerful contributors of CPP, as predisposing, precipitating or maintaining factors of chronic stress. One of the currently most credited pathophysiologic reading is through the corticotropin-releasing factor (CRF) signaling pathways. The paper:
- updates the word “psychogenic”;
- suggests a pathophysiologic reading of the psychogenic contribute to CPP, via the stress-induced corticotropin-releasing factor (CRF) signaling pathways, and differentiates predisposing, precipitating and maintaining factors;
- summarizes the pertinent evidence;
- focuses on the differential diagnosis between prominent “psychogenic” vs somatic etiology of CPP;
- highlights the common diagnostic mistakes with a focus on iatrogenic factors and nocebo effect;
- discusses the psychological and sexual consequences of CPP.
